

## BYOD Solutions with Logitech and Fastrack Technology

BYOD, or Bring Your Own Device, refers to a workplace practice where employees are allowed to use their personal devices for work purposes.

While a BYOD policy can improve productivity and convenience within an organisation, ensuring that your video conferencing and meeting experiences enjoy the same benefits can provide its own set of unique challenges.

### The two-cable solution

This method involves plugging (you guessed it!) two cables into a laptop or mobile device and connecting it to the meeting room equipment.

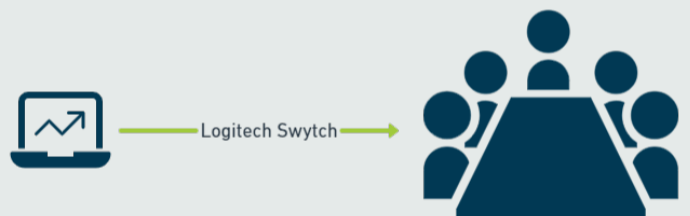

### Points to consider

- Simple and straightforward
- Risk of increased amount of cables and adaptors required because of end-user device differences
- Time consuming to troubleshoot

### The single cable solution

With the **Logitech Swytch**, employees connect their personal devices to meeting room displays, allowing for seamless presentations and collaboration via a single cable.

### Points to consider

- Neat and tidy
- Charging via USB-C
- Room solution agnostic
- Capable of remote monitoring & management w/Logitech Sync
